Problem 4 - Decrypt a Story

5.0/5.0 points (graded)

For this problem, the graders will use our implementation of the `Message` , `PlaintextMessage` , and `CiphertextMessage` classes, so don't worry if you did not get the previous parts correct.

Now that you have all the pieces to the puzzle, please use them to decode the file `story.txt`. The file `ps6.py` contains a helper function `get_story_string()` that returns the encrypted version of the story as a string. Create a `CiphertextMessage` object using the story string and use `decrypt_message` to return the appropriate shift value and unencrypted story string.

Paste your function `decrypt_story()` in the box below.

```
1 def decrypt_story():
2     code = CiphertextMessage(get_story_string())
3     return code.decrypt_message()
```

Press ESC then TAB or click outside of the code editor to exit

Correct

Test results

CORRECT
