Computer Choosing a Word and Playing a Hand

🔖 Bookmark this page

****Part B is dependent on your functions from ps4a.py, so be sure to complete ps4a.py before working on ps4b.py****

Now that you have completed your word game code, you decide that you would like to enable your computer (SkyNet) to play the game (your hidden agenda is to prove once and for all that computers are inferior to human intellect!) In this part, you will be able to compare how you as a user succeed in the game compared to the computer's performance.

You should look at the following two functions: `compChooseWord` and `compPlayHand`, before moving on to Problem 7 on the next page.

compChooseWord

If you follow the pseudocode for `compChooseWord`, you'll see that the code creates a computer player that is legal, but not always the best. Try to walk through and understand our implementation.

A Note On Runtime: You may notice that things run a bit slowly when the computer plays. This is to be expected - the `wordList` has 83667 words, after all!

Test Cases to Understand the Code:

```
>>> compChooseWord({'a': 1, 'p': 2, 's': 1, 'e': 1, 'l': 1}, wordList, 6)
appels
>>> compChooseWord({'a': 2, 'c': 1, 'b': 1, 't': 1}, wordList, 5)
acta
>>> compChooseWord({'a': 2, 'e': 2, 'i': 2, 'm': 2, 'n': 2, 't': 2}, wordList, 12)
immanent
>>> compChooseWord({'x': 2, 'z': 2, 'q': 2, 'n': 2, 't': 2}, wordList, 12)
None
```

compPlayHand

Now that we have the ability to let the computer choose a word, we need to set up a function to allow the computer to play a hand - in a manner very similar to Part A's `playHand` function. This function allows the computer to play a given hand and is very similar to the earlier version in which a user selected the word, although deciding when it is done playing a particular hand is different.

Test Cases to Understand the Code:

```
compPlayHand({'a': 1, 'p': 2, 's': 1, 'e': 1, 'l': 1}, wordList, 6)

Current Hand: a p p s e l

"appels" earned 110 points. Total: 110 points

Total score: 110 points.

compPlayHand({'a': 2, 'c': 1, 'b': 1, 't': 1}, wordList, 5)

Current Hand: a a c b t "acta"

earned 24 points. Total: 24 points

Current Hand: b Total score: 24 points.

compPlayHand({'a': 2, 'e': 2, 'i': 2, 'm': 2, 'n': 2, 't': 2}, wordList, 12)

Current Hand: a a e e i i m m n n t t

"immanent" earned 96 points. Total: 96 points

Current Hand: a a t i
```

current hand: a e c 1

"ait" earned 9 points. Total: 105 points

Current Hand: e

Total score: 105 points.
